

Saskatchewan Association of Naturopathic Practitioners

Intravenous Chelation Therapy – *adopted February 22, 2009*

For the purpose of this policy, Intravenous Chelation Therapy means the intravenous administration of ethylenediamine tetra acetate (EDTA) or magnesium disodium-ethylene diamine tetra acetate, or similar substances; or any other substances intended for the purpose of chelation.

The practice of Intravenous Chelation Therapy by Members of the Saskatchewan Association of Naturopathic Practitioners (SANP) is currently not allowed in the province of Saskatchewan pending legislation revision and until further notice from the board has been issued.
